

The Democratization of Data- Open Source Software and the Federal Government

Transparency, Open Source software and Lowering the Cost of Government are three of the five key pillars established by the new Federal CIO to transform the Federal Government into a 21st Century Information Technology enterprise that is citizen-centric.

All agencies are now required to begin reporting on their IT investments through the use of dashboards and other automated processes. We propose the Democratization of Data, where government employees are empowered to make the right decision quickly. The Jaspersoft Business Intelligence suite is the tool to achieve the government's goals.

Jaspersoft's Business Intelligence suite, the most widely used Open Source Business Intelligence software on the planet, is engaged by governments to drive better, faster, and more efficient decisions for their citizens.

- Simple, powerful, easy to use reporting answers the call for transparency
- Open Standards maximize agility without vendor lock in
- Collaborative development meets the mission critical demand for quality, cost effective applications

Benefits of Working with Jaspersoft

Jaspersoft brings new meaning to "ease of use." Our software is easy to download, design, develop, customize, implement, and manage. Jaspersoft is designed from the ground up to be integrated with other applications—bringing BI into "daily" business life. Jaspersoft features:

- Modern product architecture for Mobile, Big Data, and Cloud environments
- Modern interactive browser-based technology
- Full access to source code and customizable UIs
- A single platform for on-premise and on-demand use—fully SaaS enabled including multi-tenancy
- Open web standards like REST, SOAP, and CSS integration
- Unicode and multilingual support
- 100% pure Java architecture
- Powerful security including single sign-on, row and column level data security, and user/role repository access security

CUSTOMER SPOTLIGHT – USMC

Supporting the mission

The Marine Expeditionary Force at Camp Lejeune must be ready to deploy 24X7, 365. Camp Lejeune's Commanding Officer and the MITSC unit rely on Column Technologies and Jaspersoft to deliver on their mission - to ensure that our Marines can be first on the scene, in times of disaster, crisis or war.

"Our customers – including the USMC – need on-demand, real-time, web-based access to operational information as well as management summaries and historical trend analysis for executives. Jaspersoft Business Intelligence is the right fit."

Sam Friedman

“With a long technology history and attention to executive-level government and business users, Jaspersoft represents how a mature open source software company functions today,” “We’re seeing more and more adoptions by government at the application level, and Jaspersoft is in a good position to deliver. We congratulate them on their GSA certification and meeting Section 508 technical provisions.”

Deb Bryant
Public Sector Community Manager

- Minnesota Department of Health
- Maricopa County Attorney's Office ITD

CUSTOMER SPOTLIGHT – NRC

Easy, scalable and feature rich

Beginning with the initial EDATS rollout, results were both positive and promising. Gradually, the 35 disjointed, “siloeed” correspondence tracking systems and tools were replaced with a single console for initiating and tracking activity—affording unprecedented standardization and improvement of business processes throughout the Agency.

“Jaspersoft and HandySoft provide us with a fully integrated COTS suite, meeting our unique requirements: addressing a massive volume of time-sensitive correspondence and action items requiring a wide range of responses. The software is simple, scalable and includes all of the major enterprise features needed to track correspondence and action items, while providing greater visibility for managers throughout the agency.”

James Schaefer
Deputy Director, Office of Information Services, Nuclear Regulatory Commission
