

EASYPAY selects Jaspersoft's iReport for performance

EASYPAY GROUP, a full service provider, with ambitions to exceed client expectations needed to improve the performance of its reporting engine and after extensive evaluation turned to Jaspersoft's iReport. iReport is now exceeding the performance times of its former reporting engines by up to ten times and EASYPAY has cut its development time significantly.

EASYPAY GROUP, based in Belgium and France, is a full service provider; offering high quality, competitive organisational management. Being an all-round service supplier, its mission is to 'exceed the expectations of the client in a dedicated and results-oriented manner'. EASYPAY assists its clients to realize their aims whilst taking into account their budgets, timelines and deadlines within both the public and private sector regardless of size, sector or region. The organisation offers full consultancy and training along with off-the-shelf and customised software solutions.

At the heart of EASYPAY's offering is its human resources software which provides all the HR processes an organisation needs from time management to salary calculation and to modern HRM processes. To fulfil its mission statement, EASYPAY needs a development platform that will enable it to rapidly respond to its customers' requirements in a competitive manner. Providing flexible, easy-to-use and deploy reporting for all of its applications is key to the organisation's popularity.

Having used Jaspersoft's iReport internally for two years EASYPAY realised that it could well be used for its commercial projects. After a rigorous evaluation period, the company decided to replace its older report generators; Apache FOP and Accusoft Pegasus with iReport. According to Pieter Pareit of the Research and Development Department within EASYPAY, "Jaspersoft's iReport was selected mainly because of its performance. We found that in some cases iReport performed ten times faster than our former report generators.

"We are also extremely impressed with its ease-of-use as a result of it being built on the NetBeans platform. By using this tool we have significantly reduced our development time for new projects which is good news for us and more importantly for our customers. Its flexibility makes it ideal for compiling not just simple single page reports but also for those reports with complex statistics running to thousands of pages. Charts, images and barcodes are also very straightforward to integrate into the reports."

According to Pareit, the migration to iReport went seamlessly; "All of our developers followed a two-day in-house training course which included some real 'live' exercises and then we were up and producing reports."

RESULTS

Rapid development time and increased performance

EASYPAY is now using iReport as its reporting engine in all of its products and in Belgium 15% of all payslips in the country are produced using iReport – that is 500,000 payslips per month. But EASYPAY is not stopping there. “We have a high demand for business intelligence functions within our products. Currently we are using a Business Objects BI platform but now that our developers are familiar with Jaspersoft and iReport the effort required to migrate to JasperAnalysis and JasperETL is becoming minimal so I anticipate a move very soon,” concludes Pareit.

About Jaspersoft Corporation

Jaspersoft provides the most flexible, cost effective and widely deployed Business Intelligence suite in the world, enabling better decision making through highly interactive, web-based reports, dashboards and analysis. Leveraging a commercial open source business model, Jaspersoft provides end-to-end BI capabilities at a fraction of the cost of other vendors. The BI suite includes pixel-perfect enterprise reporting, ad hoc query, dashboards, OLAP and in-memory analysis, and data integration. Jaspersoft is the only BI vendor that enables companies to adapt to the new, virtualized world by providing a complete spectrum of on-premise, multi-tenant SaaS and cloud-based deployment options for both embedded and standalone business intelligence. Unlike traditional BI vendors, Jaspersoft is built on a modern, light-weight, standards-based architecture and offers greater vendor independence thanks to its open source codebase. Unlike niche BI vendors, Jaspersoft represents a safe choice with tens of thousands of production deployments across a wide range of industries.

Jaspersoft’s open source business intelligence software has more than 12 million product downloads worldwide, 175,000 production deployments in 100 countries and over 13,000 commercial customers. Its BI suite is advanced regularly by a development community of more
