

Vinteh aids Croatian Business with Jaspersoft iReport

In austere times, Croatian businesses need to maximise existing resources whilst at the same time maintaining a competitive edge. Business consultancy, Vinteh, assists its clients by providing solutions that include the use of Jaspersoft iReport to deliver all their reporting requirements.

Business consultancy, Vinteh, based in Croatia, provides a wide range of leading Croatian businesses with a range of IT hardware and software solutions. These include infrastructure, servers and virtualisation, database administration, data integration, reporting and business intelligence (BI) systems, document management and customer relationship management (CRM). The company embraces open source technology and provides clients with best-fit solutions competitively priced.

Some four years ago, Ksenija Bastijanovic Cvijanovic, consultant at Vinteh was assisting to Agrokor Group, the largest privately-held company in Croatia operating in the food industry, with a document capture project using EMC's Captiva products on behalf of King ICT. According to Ksenija, "At that time Captiva had little to offer in terms of reporting and statistics so it was up to me to find a solution that would track the capture process and deliver daily statistics by user, scanner, document type and so on and also to monitor the process."

"The budget was insufficient for an enterprise reporting tool so I introduced OpenReports as a reporting service and used Jaspersoft iReport to create the reports. This solution was so well received by both end users and developers that we have continued to use it on subsequent projects."

iReport is now used by Agrokor to monitor and track the process of more than 50,000 documents a day and also reports from document management systems including Captiva and Documentum

Textile production and retail company, Amadeus Jeans, are using custom developed document management solution aktivManager using iReport for its procurement and incoming invoice approval process. iReport is also the reporting tool for Vinteh's CRM solution used by Pavletic – Croatia's largest provider of healthy sleep products.

"iReport is ideal for all of our projects. Its database independence, ease of creation and use, reliability and light resource requirements are invaluable but best of all is its lack of implementation cost," said Cvijanovic. Vinteh has also evaluated Oracle reports and MS reporting services but found that they could not offer the advantages of the Jaspersoft software.

RESULTS

Cost-effective business intelligence solutions for customers

“Being open source, the Jaspersoft software dovetails well with our philosophy of providing the best solutions for our clients at the best price avoiding the cost and lock-in of vendor specific products. The economic situation in Croatia, like many parts of the world, is not bright at the moment and so we are providing solutions that will help organisations in these difficult times. By enabling them to use their existing resources and databases and integrating data from existing systems and databases and providing consolidated reporting with Jaspersoft makes it unnecessary to invest in expensive BI systems,” concludes Cvijanovic.

About Jaspersoft Corporation

Jaspersoft provides the most flexible, cost effective and widely deployed Business Intelligence suite in the world, enabling better decision making through highly interactive, web-based reports, dashboards and analysis. Leveraging a commercial open source business model, Jaspersoft provides end-to-end BI capabilities at a fraction of the cost of other vendors. The BI suite includes pixel-perfect enterprise reporting, ad hoc query, dashboards, OLAP and in-memory analysis, and data integration. Jaspersoft is the only BI vendor that enables companies to adapt to the new, virtualized world by providing a complete spectrum of on-premise, multi-tenant SaaS and cloud-based deployment options for both embedded and standalone business intelligence. Unlike traditional BI vendors, Jaspersoft is built on a modern, light-weight, standards-based architecture and offers greater vendor independence thanks to its open source codebase. Unlike niche BI vendors, Jaspersoft represents a safe choice with tens of thousands of production deployments across a wide range of industries.

Jaspersoft’s open source business intelligence software has more than 12 million product downloads worldwide, 175,000 production deployments in 100 countries and over 13,000 commercial customers. Its BI suite is advanced regularly by a development community of more than 150,000 registered members. For more information visit: www.jaspersoft.com and www.jasperforge.org.
