JASPERSOFT™

Embeddable. Flexible. Scalable.

Deploy anywhere, any way with Jaspersoft® commercial edition

At a glance

When integrating any piece of software into another, flexibility and configurability are paramount. As an enterprise reporting and analytics solution, Jaspersoft gives developers the power, control, and flexible endpoints needed for seamless integration into any environment.

Flexibility at its best

Jaspersoft software is architecture agnostic, making any deployment scenario on-premises, private or public cloud including Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP), or a hybrid approach - possible.

With our commercial edition, you can deploy Jaspersoft using:

- A binary installer
- Source code
- WAR file installer
- Container deployment

Jaspersoft products are compatible with various deployment platforms that support Docker and Kubernetes engines. For example, the compatibility has been confirmed on platforms such as AWS Elastic Container Service (ECS), AWS Elastic Kubernetes Service (EKS), Azure Kubernetes Services (AKS), Azure Container Instances (ACI), and Openshift. While these platforms have been tested and verified, Jaspersoft products can also be deployed on other platforms that work with Docker and Kubernetes engines.

Visit Jaspersoft for Docker to see samples and more information on how to build, configure, and deploy JasperReports Server in containers.

Platform support

Below is a summary of Jaspersoft commercial edition's platform support.
